PROJECTS

Face Recognition Using Python and OpenCV

- A real time face recognition system is capable of identifying or verifying a person from a video frame.
- To recognize the face in a frame, first you need to detect whether the face is present in the frame. If it is present, mark it as a region of interest (ROI), extract the ROI and process it for facial recognition.

VIT Hotel Management System

- The project, Hotel Management System is a web-based application that allows the hotel manager to handle all hotel activities online. Interactive GUI and the ability to manage various hotel bookings and rooms make this system very flexible and convenient.

College Enquiry ChatBot Android App

- The College bot project is built using AIML (Artificial Intelligence Markup Language) that analyses users queries and understands users message.
- Students just have to query through the bot which is used for chatting. Students can chat using any format there is no specific format the user has to follow.

EzRoadtrips Android App (Available on Play Store)

- Developed this road trip planner and blogger app, fully designed the UI of the App
- Used Mapbox Api for offline Navigation to use your trip planner without using internet data. Also worked with team and designed Cab Seat Booking System using Firebase

Online Game

- A small online shooting game made using Construct 2 Software. A simple game where you use mouse to control the directions of your hero and arrow keys to move your hero - left, right, up, or down. The main motive of the game is to kill the monsters. Link: <https://adwayujjwal.000webhostapp.com>

Offline Image Search Engine

- Simple image-based image search engine using Keras + Flask. You can launch the search engine just by running two python scripts.
